

USER MANUAL ON WIFI & BLUETOOTH CONNECTION

Mobile phone connection with the charger by Wifi & Bluetooth:

1. Click the link: <https://www.afaxpower.com/download> to download the APP for Android phones and iPhones
2. Turn on Bluetooth on your phone and there is a wifi signal.
3. Open the APP, add the device, click "Add" after finding the device, enter the wifi password to connect to the wifi, enter the charging management page, and click Charge to start charging. (If there is no WiFi at the place where the charging pile is located, use another mobile phone to open a mobile hotspot, then use your mobile phone to connect to the hotspot and then turn on Bluetooth to connect to the charging pile.
4. When using it later, be sure to ensure that the wifi signal cannot be interrupted, connect to Bluetooth and open the APP (the phone must have wifi and Bluetooth functions turned on at the same time)

Problem solving:

It has been connected to local wifi when shipped or tested. If it is not restored to the initial state and is connected to wifi in another place, it will fail to connect.

Solution:

1. Turn off the power, press the emergency stop, and pull out the charging gun;
2. Reconnect the power, the red light will keep flashing and there will be an alarm sound;
3. Wait until the red light stops flashing, restore the emergency stop switch, and wait until the small wifi icon on the display disappears to indicate that the initial state has been restored (note that the above operation will also restore the card swiping mode to the plug-and-charge state, which needs to be swiped after powering on Card)
